

WORKSHOP IN METHODS + CEWIT

Improving your Writing Project Workflow with a Collaborative Online Platform: Overleaf and ShareLaTeX

Dr. Olga Scrivner

Research Scientist, Cyberinfrastructure for
Network Science Center
CEWIT Faculty Fellow

This workshop is offered in partnership between the Center of Excellence for Women in Technology (CEWiT) and the Workshop in Methods. Register to attend at <https://bit.ly/20BJuYB>.

Overleaf (recently merged with ShareLaTeX) provides a collaborative interactive platform for writing, editing, and publishing articles. Overleaf also offers a variety of templates to create assignments, syllabi, reports, presentations, and newsletters.

In this workshop you will learn about Overleaf and LaTeX, a markup language, which enables you to separate your context from formatting (e.g., font, size, margins), thus allowing you to concentrate solely on your ideas. Particularly, using LaTeX is beneficial if your writing incorporates formulae, equations, glosses or your journal requires a specific article format and bibliographic style.
